

## Department of Computer Engineering

The history of the Department of Computer Engineering dates back to the Chair of Electronic Calculus founded in 1970, which later became a department affiliated with the Faculty of Electrics and Electronics following new organizational measures introduced in 1992.

Our aim is to educate highly qualified computer engineers who have a good command of the basic sciences, who can analyse, design and apply software/hardware systems and produce algorithmic solutions to problems using analytical thought and who respect ethical values.

The curriculum of our department, which aims to provide engineering education at international standards, is prepared in view of both science and technology and around the opinions of academic staff, students, trade

associations and public and private sector institutions. It is supported by feedback mechanisms so the system can react rapidly to variable qualities, provide continuity by constantly renewing itself and achieve its targets.

Our vision is to “become a department which academically and technologically determines the direction of the information technology industry on a world scale.”

The academic staff of the Department of Computer Engineering includes 2 professors, 7 assistant professors, 2 teaching staff and 17 research assistants at 3 divisions employed in teaching and research positions.
