

Department of Mechatronics Engineering

The Department of Mechatronics Engineering will begin education in the 2008-2009 academic year as part of the Faculty of Mechanics; and the department aims to educate engineers in the field of mechatronics, a new branch of science uniting mechanical, electronic, software and control systems technologies.

As an interdisciplinary branch developing via the collaboration of more than one branch of engineering, Mechatronics acts a stimulant in the development of other branches of engineering as well.

Cameras, video cameras, photocopy machines and washing machines which are widely used as consumer goods today and all “intelligent products” like CDs with their sensors and computer control and activating mechanisms are simple and typical examples of mechatronic systems.
