

## Department of Statistics

Statistics is the science pertaining to, in all branches of science and fields of research, the collection, summarization, tabulation and analysis of numerical data, the analysis and generalization of the results, estimation of the parameters of the population or the investigation of the existence and degree of relationships among variables, indication of the factuality of the differences between samples and the determination of experiment settings and observations.

The aim of our department which was founded in 1990 is to train statisticians who will perform research in the fields of engineering, medicine, economics and the social sciences using statistical methods and design and develop programs in the field of informatics.

The curriculum is designed to supply students with a competent level of information in the field and develop their ability in line with these aims, and contains basic mathematics courses as well as courses on statistical applications.

Our department has 2 divisions with an academic staff of 2 professors, 2 associate professors, 4 assistant professors, 2 teaching staff and research assistants.

### Division

- Theoretical Statistics
- Applied Statistics
